DATA SHEET

Features

- High Accuracy
- Heavy Duty Design
- Standard and Custom Sizes
- Protective Barrier
- ELI 200 Digital Display
- Printer Option
- Calibration Certificate
- Optional Large Display

Description

The Combi HD SERIES of weigh scales are heavy duty scales designed for the Air Cargo Industry. They come with a heavy duty 'toblerone' protective barrier as standard. Each scale utilises the unique "V-ball" load foot, which allows the scale to absorb impact without damage. This also improves accuracy by reducing the effects of side load on the load sensors. Each scale is calibrated to a Cargo System 3 digital display with display resolutions of 1, 2, 5 and 10 kg's. The System 3 is also switch able between Kilo's and Lb's and has the option of running a printer. Please see separate data sheet for full details.

HD weigh scales are available in standard and custom sizes and can easily be installed into an existing cargo system including scissor lift.
